

Interceptor Maintenance

FROM TANKS & PIPEWORKS LIMITED

**Maintenance, Inspection and
Cleaning of Forecourt Interceptors
and Drainage Systems.**

INTERCEPTOR SERVICES

KINGSLODGE, LONDON ROAD, WEST KINGSDOWN, KENT, TN15 6AR. UK.

“It is vitally important that Forecourt Interceptors are regularly maintained to ensure they run efficiently”

Regulations require the installation of Forecourt Separators to ensure that drainage from tanker stands, fuel dispenser islands and the forecourt area under the canopy is provided to ensure that pollutants cannot enter normal water drainage systems. To ensure that they work efficiently it is important that regular maintenance is carried out and that silt and debris is removed by a licensed disposal operator.

Poorly maintained drainage systems and interceptors can lead to an increased risk of flooding and contamination. It is therefore recommended that regular inspection, maintenance and cleaning of Forecourt Interceptors be scheduled to ensure that the installation continues to operate efficiently. The Environment Agency Guide (PPG3) recommends maintenance should be carried out at 6 monthly intervals.

This specialist cleaning service is provided in the UK by Tanks & Pipeworks Limited. This leaflet is for guidance only and provides an outline of the interceptor services offered.

Tanks & Pipeworks Limited is licensed for waste disposal in accordance with current legislation.

INTERCEPTOR SERVICES

SCHEDULED MAINTENANCE - we can provide a six monthly scheduled maintenance plan for your interceptor ensuring compliance with current UK Environment Agency ² recommendations (PPG3).

SEPARATOR CLEANING - to avoid the risk of flooding and to prevent pollutants from entering the sewage or water system we can provide a full silt removal and cleaning service. Waste is removed using our own vehicles. We are licensed for waste disposal under current legislation.

FILTER REPLACEMENT, MAINTENANCE & REPAIR - blocked or damaged interceptors will not operate efficiently and could lead to forecourt flooding or leakage. We can replace filters and provide full maintenance and cleaning of the separator and associated drainage system using jet cleaning equipment to ensure your system operates safely.

RESTRICTED ACCESS PROBLEMS - for interceptors having a small diameter access port ¹, we are able to insert a specialist Remote Cleaning Device, operated externally using CCTV. This unique device has been designed and developed by Tanks & Pipeworks and is exclusively used by our trained technicians.

INSPECTIONS - allow our experts to provide a full drainage and separator inspection with a documented report. Our independent assessment of the condition of the system may be useful for insurance purposes or when considering the sale of the asset.

UPGRADES - changes to the fuel delivery point and/or the number of dispensing islands may require upgrades to your drainage or separator installation. Allow us to provide the necessary specialist services with the minimum of inconvenience to your business.

OIL LEVEL ALARMS - existing systems can be modified to incorporate oil level warning devices with intrinsically safe ATEX approved detectors with or without SMS messaging.

TRAINED TECHNICIANS - all services are carried out by our own trained and experienced technicians holding current UKPIA Safety Passports. No third party contractors are used.

NOTES

NOTE 1 *To engage the remote cleaning unit a minimum aperture of 455mm deep x 260mm wide is required.*

NOTE 2 *PPG3 Pollution Prevention Guideline 3: Use and design of oil separators in surface water drainage systems is available from Environment Agency (England & Wales), Scottish Environment Protection Agency and Environment & Heritage Service of Northern Ireland.*

NOTE 3 *For the purpose of clarity the term "SEPARATOR" and "INTERCEPTOR" in this brochure is considered as having the same meaning. In forecourt applications it is normal practice to install Full Retention Separators complying with BS EN 858-1 with a minimum 7,600 litre capacity.*

FEATURES	BENEFITS
Scheduled interceptor cleaning plan	<p>Ensures operating efficiency.</p> <p>Complies with current PPG3 recommendations.</p> <p>Reduces risk of forecourt flooding or pollutant contamination.</p>
Licensed waste removal	Safe waste disposal with documented evidence.
System inspection and reporting	Provides third party written assessment of the system for insurer or other interested party.
<p>Trained technicians</p> <p>Remote cleaning option</p>	<p>Trained technicians holding current UKPIA Safety Passports.</p> <p>Able to clean interceptors with restricted access using CCTV remotely controlled device.</p>
Repairs and upgrades	Provide full range of construction services to repair or upgrade the system with minimum of operational inconvenience.
